#### STRATFORD VOTERS WILL SET ANNUAL TAX ON PROPERTY

Town Meeting to be Held Next Week - Will Consider Stiles Judson Gift.

(Special to The Farmer.) Stratford, Oct. 8 .- Notice has been posted that the annual town meeting will be held at 8 o'clock Monday, Oct. 11 in the Town hall. The call for the meeting includes: To hear the annual reports of the town officers and to accept or reject the same, to hear the recommendations of the board of finance and to accept or reject the same; to consider the advisability of accepting the gift of \$5,000 made to the town in the will of Stiles Judson for erection of a drinking fountain to be selected by Judge Howard J. Curtis; also to lay such taxes as may be necessary to defray the running ex-penses of the town for the ensuing year and to fix a time when such a tax shall be due and payable and to transact any other business which the meeting may deem fit.

The newly elected selectmen held their first meeting yesterday after-noon. The first business of the meeting was the swearing in of John J. Williams and Fred W. Nettleton as second and third selectmen respective-ly by Town Clerk Harold C. Lovell. unanimous vote, John Pullman of Bridgeport was elected to succeed the firm of Hill & Boardman as town counsel. Edward J. Manchester of Main street was appointed a special

Miss Frances Russell, librarian at the public library and her assistant, Miss Marjory Havens are in Norfolk, Conn., attending a state convention of librarians.

Professor Herschel Parker of Coumbia university, New York, proved, last night to the satisfaction of a large audience at Red Men's hall that Dr. Cook, the explorer, never made the ascent of Mt. McKinley, as he claimed. The subject of the lecture was "Alaska," but the speaker dealt particularly with the ascent of Mt. Mc-Kinley, refuting the statements attributed to Dr. Cook. With a party Prof. Parker made five separate trips

to ascend the mountain The first four trips ended without Dr. Cook was a member of the first expedition, which was unsuccessful. A few weeks had elapsed when Dr. Cook and a party went in from another direction and took' views of what he claimed later to be the summit of Mt.McKinley. His statements were later alleged to be false, as Prof. - Parker claimed that the slides were taken 20 miles from the base of the mountain. The lecture was illustrated by 150

AND SEAS-LOCHS DEEPER THAN SEAS

The traveler who has sailed from Hamburg to Hull, Dublin to Liver-pool, or from Cherbourg to Plymouth, and later finds himself paddling in a he may have below him a far greater be only seven feet above the level in depth of water than when he travers- calm.—Strand Magazine. ed the North Sea, Irish Sea, or the English Channel. When we look at a map of the British Isles and note the 70 miles between Wales and Ireland. 100 miles from Devonshire to Brittany, and the 400 miles that separate England from Germany, it seems hardly credible that the nar-Loch Morar are all more than twice

deepens considerably. The deepest part of the Irish Sea is about 300 feet. The English Channel sputh of Ply-mouth has a depth of 264 feet. Where the Louisitania lies, a few miles southwest of the Old Head of Kinsale, the depth will be about 300 feet. When the great vessel sank one end probably rested on the ground before the other disappeared, and that would account for the smallness of the suction that followed her engulfment. If the vessel were standing on end at the place where she now lies nearly twothirds of her would be sticking out of the water.

Remembering that the sea-depths about Great Britain range from 180 feet to 300 feet (with the exception of one or two holes off the west of Scotland), let us beake ourselves to the "bonnie banks" of one of the most beautiful of the Scottish lochs, Lohh adventures of Rob Roy and Baillie tourist, and that is the great depth. Just at the foot of lofty Ben Lomond, where the loch is less than a mile wide, the depth is no less than 630 feet. As the loch is no more than 28 feet above the level of the sea, its deepest part must be twice as low in the earth's crust as the lowest part of the adjacent seas. If St. Faul's Ca-thedral were at the bottom of Loch Lomond it would be entirely out of sight. If the ill-fated Lusitania had been set on end in its deepest part she would have shown nearly one-fourth of her length above thew ater, as that ggantic vessel was 800 feet long. If she had been planted perpendicularly would have been able to show her

lose, and no more. For a long time Loch Ness had the reputation of being the deepest of the Scottish lochs, but in 1879 J. Y. Buchanan, F. R. S., showed that Loch Morar was deeper by several hundred feet than Loch Ness. If we could fix the Lusitania erect in the depths or Loch Morar we should lost sight of her altogether. Even if the Scott monument (200 feet) could be stuck above her bow, the lightning rod of the monument would not fret the sur-

face of that abyemal loch. The soundings of Loch Morar reveal a depth of 1,017 feet, which is almost exactly the same as that of Lake Geneva, but the bottom Lage Geneva is higher than the surface of Loch The Eiffel Tower itself would be

completely submerged in this high-land loch, and if Cleopatra's Needle (70 feet) stood on it half of it would e out of sight. Let anyone stand in St. Paul's churchyard and let his eye travel up the steps, columns, dome, and ball to the golden cross. Themset him im-agine another St. Paul's above that again: steps, columns, dome, ball, and

## The Most Style at the Least Cost

That's the Rogers Proposition to the Men of Bridgeport

Does it appeal to you? Is it what the clothes buyer of today wants? IT IS! We know it is by the business we're doing-by the increased numbers of men who wear the clothes with the significant ROGERS LABEL sewed on the inside pocket. That label means something very important to every man-it means first that the style of his suit or coat is ABSOLUTELY COR-RECT; second, that he is going to get more GOOD WEAR out of his clothes than he ever did before; third that he is PROPERLY FIT-

TED; and fourth and last that he has pocketed a 25% SAVING because he bought his clothes DIRECT FROM THE ROGERS FACTORY and wasn't "easy" enough to pay out his good money in middleman's profits.

You Can Do the Same---TOMORROW Suits \$10 to \$25. Top Coats \$12.50 to \$25, Trousers \$2 to \$5

ment. Then let him suppose himself standing at the bottom of Loch Morar floating above it all. If he were in the boat, leaning over the gunwale, peering below the surface, he would probably discover the top of the monu-

ment nine feet below.

Take the largest of the Pyramidshat of Cheops, 460 feet in height. Set St. Paul's on top of it, and to com-plete the pile borrow the dome of the British Museum (160 feet). The whole of the dome would be washed cance on the unruffled surface of a by the vaters of Loch Morar on a Highland loch, seldom realizes that stormy day, as the highest part would

STRANGE ANIMALS OF

PREHISTORIC TIMES.

North Platte River generally car ries a considerable volume of water, while the South Platte is dry except now slits or oblongs representing Loch during times of floods, because its Lomond, Loch Tay, Loch Ness, and water is used for irrigation farther The North Platte is 650 the depth of the wide, outlying seas.
The average depth of the North Sea square miles. At the city of North is 288 feet. Towards the north it Platte the river has a maximum discharge, according to the United States Geological Survey, of about 20,-000 cubic feet a second and a mini-mum discharge of only 70 cubic feet a second. Its average volume of flow during the nine months from March to November is about 3,500 cubic feet a second.

From Dexter to Ogalalla, Nebr.,

South Platte River and the railroad are close to the bluffs bordering a table-land. Here and at other places where the bluffs come close to the river many travelers in the days of the Overland Trail suffered from attacks by Indians and white outlaws, who were wont to swoop down un-expectedly from their hiding places In the hills to murder and plunder It is difficult for the modern traveler surrounded by the luxuries of the railway train to realize the hardships Lomond owes much of its fame to the and dangers endured by the men and women of indomitable courage and energy who under such conditions Nicol Jarvie, but it has another inter-est often unsuspected by the passing invaded and finally conquered the

The fossils found in the Ogalalla and Arikaree formations show that western Nebraska was inhabited in what the geologist terms late Miocene time by animals of very different types from those living there now, and also that very different physical conditions prevailed at that time, In place of the dry, barren plains of today there were numerous streams and swampy lowlands.

Horses with Huge Claws. The Arikaree formation contains great numbers of bones of a peculiar type of animals called chalicotheres. in Loch Ness, where the depth is They were larger than a large horse greater by 130 feet, the leviathan and had a horse-like head, long front legs, and shorter hind legs, but every foot had three toes, each of which in place of a hoof bore an enormous claw. An equally strange form of Miocene time is a deerlike animal called Syndyoceras. Its head somewhat resembled that of an antelope but was longer and had four horns, the larger pair, over the eyes, curv ing inward and the smaller pair, nearer the muzzle, curving outward. Camels were common in North America during the Miocene epoch, and several forms have been found. One was about the size of a sheep and is supposed to be the ancestor of modern camels and Ilamas. Others were large and had long necks like the All these ancient camels had hoofs like cattle, not broad cushioned feet like those of the camels of the present day. oses were abundant, and hundreds of specimens of Teleoceras, a very heavy-bodied, short-limbed type, have been found. The proboscidians, of which the elephant is the best-known type and the only living representative, became prominent during the Miocene epoch, when a large mastodon called Trilophodon was com-mon,—(Overlook Guldebook, U. S. oss. On top of that again let him, mon.—(Overlook of imagination, set the London monu-Geological Survey.)
